Variant B

Variant C

Variant D

Unimille – Flexible coin lock for lockers

Areas of use

ASSA's new coin lock series, Unimille, is the perfect solution for any location requiring temporary, safe storage of belongings. Examples include storage of clothing and valuables at gyms and public pools, theatres, hospitals, libraries, stores or bus and train stations.

Properties

We developed the Unimille series with security, flexibility, design and performance in mind. The materials and design are specially intended to suit humid, corrosive environments. The locks are fitted with a sturdy hook bolt, which ensures extra strength in the connection between door and frame. The lock can be adapted for most coins used in the world.

The ASSA Unimille series comes in seven basic versions. You can also choose between two levels of security of the lock cylinder, resulting in a total of 14 different versions. Perfect for any situation. And of course the lock is available for right and left-hung doors.

Variant A has a coin slot. when the correct coin is deposited the lock becomes operational allowing key removal. The coin is automatically returned when the lock is opened. Another option here is to fit the lock with a coin box that collects the coin on unlocking, meaning that the user pays a small fee for the use of the locker.

Variant B has two coin slots, but only one is needed for access to the locker. This way, the user can choose to deposit, say, £1 or 1 Euro coin, making the lock more user friendly. Other coinages are of course available. Ideal in border areas between countries. A coin box is also an option for version B.

Variant C has two coin slots and both coins are required for access to the locker. This larger deposit reduces the risk of keys "walking off." Like the A and B versions, you can choose to install a coin box.

Variant D is always fitted with a coin box. The user inserts two coins and can then open and close the locker an unlimited number of times without putting in additional coins. When the user leaves the locker for good, he or she presses the (R)eturn button and receives one coin in return, while the other drops into the coin box as payment.

Security levels, cylinders

The ASSA Unimille is always delivered with interchangeable cylinders. This provides several advantages – for example, you can easily replace the cylinder of a coin lock if the key should disappear.

Locks are always supplied under a master key with a choice of cylinders as shown below, dependant on customer requirements and security concerns.

ASSA 6-pin cylinders offer a medium level of security with a large number of possible combinations. The high-quality cylinder is very reliable in all types of environments.

ASSA 8460

The ASSA Desmo is a patented top-security lock cylinder. It offers an extremely large number of combinations, allowing you to build very large lock systems with it. Keys can only be copied at the factory, minimizing the risk of illicit copying. There are currently no known methods of manipulating the ASSA Desmo cylinder. Its design ensures that the key is extremely strong.

ASSA 8950 Desmo

The “penalty” function

The penalty function prevents users from “keeping” their locker by not returning the key after use.

If you chose the Desmo cylinder for your Unimille lock, the penalty function is standard.

The lock owner has a special key that empties the deposit (the coin) from the lock, resetting locks in which the key was not returned. The person who kept the key must insert a new deposit when he/she returns to the locker in order to keep using it.

This function is standard on locks with the Desmo cylinder and is available as an option on the 6-pin cylinder.

Other properties

- Adjustable to different coinage.
- Automatic coin reject.
- All coin boxes in the same system have the same access lock.
