

RFID Wristbands for Lockers

RFID Silicone Wristbands for Locker Access – MIFARE Classic 1K provide a practical contactless access solution for gyms, swimming pools, spas, leisure centres and changing rooms. Each wristband uses a 13.56 MHz MIFARE Classic 1K RFID chip, making it suitable for compatible electronic locker systems and reader-controlled access points. The flexible silicone body is comfortable to wear, waterproof and well suited to wet or humid environments where keys, cards and fobs can be inconvenient.

These RFID locker wristbands help sites issue access quickly to members, visitors or staff. They can support colour-coded control, user identification and simple locker management across busy facilities. Custom colours, numbering and branding are available on request, helping operators match wristbands to membership types, zones or facility branding.

Preprogramming is also available for compatible systems, including Ojmar OTS locks when the correct site code is supplied. Before ordering, check that your existing locker system supports MIFARE Classic 1K technology, as some systems use different chip types or encoding methods. Total Locker Service can advise on RFID wristbands, locker locks and replacement locker access products for new or existing installations across the UK. Bulk orders suit leisure operators needing durable, branded bands at scale and simple reissue.
