

UK CUT-TO-CODE REPLACEMENT KEY SERVICE

Replacement Locker Keys **Cut to Code**

Locker keys cut from confirmed manufacturer codes for schools, workplaces, retail sites, contractors, leisure facilities and individual customers across the UK.

Total Locker Service cuts many common replacement locker key ranges in-house. Where the correct manufacturer, key series and code are known, an original key is not normally required. The supplied customer records show both single replacement orders and larger multi-code batches.

REPLACE THE KEY WITHOUT REPLACING A WORKING LOCK

Keys produced from the correct code and lock series

The current Total Locker Service Locker Keys page allows customers to select the manufacturer or key family, enter the key number or lock code and order the required quantity. A replacement can often be cut without the original physical key when the code and series are confirmed.

Where the code can come from

The key number may be stamped on the original key, shown on the lock face or barrel, or held in an approved site key schedule. The locker door number is not automatically the cutting code.

Schools and colleges

Single replacements, spares and large scheduled batches across managed locker estates.

Workplaces and retail

Replacement keys for staff lockers, back-of-house storage and facilities teams.

Leisure facilities

Key and coin-lock ranges used in gyms, pools and changing rooms.

Contractors and FM

Mixed-code and mixed-brand orders for existing sites and refurbishment work.

CURRENT ORDERING SCOPE

Service	Replacement locker keys cut to code from confirmed manufacturer/key information
Original key needed?	Not normally, when the correct series and complete code are known
Order size	Single replacements, spare keys, mixed-code schedules and bulk orders
Brands shown	Probe, Helmsman, Lowe & Fletcher, Ojmar, ASSA, Pure, Link, Garran, QMP and others
Code sources	Existing key, lock face, barrel or accurate approved site records
Identification help	Clear photos can be used where the lock or key family is uncertain
Typical common-range lead time	Approximately 1-3 working days, subject to range, stock, order time and quantity
Restricted keys	Certain master/override keys only for approved site administrators with suitable verification

Checks before submitting a code

- Record the complete code, including prefixes and leading zeroes
- Confirm the manufacturer or key series
- Do not substitute a locker door number for the key code
- Check whether the fitted lock has previously been replaced
- For larger orders, provide each code and required quantity in a schedule

FROM ONE REPLACEMENT KEY TO A 79-KEY SCHEDULE

Orders across education, retail, construction and facilities use

The attached records evidence 120 replacement keys across seven orders. Personal names, home addresses, telephone numbers, email addresses, payment references and prices are intentionally excluded from this public case study.

HAVERFORDWEST, WALES

Pembrokeshire College

Pure series 4000: a large multi-code replacement key order for the Learning Resource Centre. The order demonstrates scheduled bulk cutting from numerous recorded key numbers.

79

EXETER, DEVON

Sainsbury's

Probe 36/38 series: thirteen cut-to-code keys covering multiple key numbers in one staff/facilities order.

13

CLITHEROE, LANCASHIRE

MPA Hire / Tarmac Trading

Mixed key families: four Probe 36/38 keys plus six Link CC-series keys. The same order also included six replacement dry-area cam locks.

10

EDINBURGH

Linear UK Group / Linear Design & Construct

Pure series 4000: fourteen individually coded replacement keys supplied as one managed batch.

14

INDIVIDUAL UK REPLACEMENT ORDERS

Single and small-quantity replacements

Three additional attached customer records cover one Probe 36/38 key, two Pure series 4000 keys to one code, and one ASSA coin-lock key. These orders show that the same cut-to-code service supports both facilities-scale schedules and one-off replacements.

4

The MPA Hire / Tarmac order contained 16 cart items in total: 10 replacement keys and six replacement cam locks. The 120-key case-study total counts keys only and does not include those six locks.

CUT-TO-CODE SERVICE AT DIFFERENT SCALES

One service covering bulk key schedules, mixed brands and individual replacements

attached order records used as the case-study evidence base

1-79

range from a single replacement key to the largest attached bulk order

6

replacement cam locks supplied alongside keys in one mixed maintenance order

KEY FAMILY MIX IN THE SUPPLIED RECORDS

Replacement keys by evidenced series

Pure series 4000		95
Probe 36/38		18
Link CC series		6
ASSA coin lock		1

Operational value

Cut-to-code ordering lets a working locker remain in service when the correct key information is available. Bulk schedules also allow facilities teams to replace many lost or missing keys without presenting each original key for copying.

CURRENT SERVICE CHARACTERISTICS

Cut to code	No original normally required	Single keys		
Bulk schedules	Mixed codes	Probe	Pure	
Link	ASSA	L&F	Ojmar	Helmsman

When a new lock may be the better option

If a lock is damaged, seized, cannot be identified reliably, or a lost/stolen key creates an unacceptable security risk, replacing the complete lock may be more appropriate than supplying another user key.

For uncertain key codes, clear photographs of the key, lock face, barrel and visible markings can be checked before ordering.

ORDER REPLACEMENT LOCKER KEYS

Send the manufacturer, key series, complete codes and quantities.

Total Locker Service can cut many common locker key ranges to code and help identify uncertain keys or locks before an order is placed.

Case-study basis: current Total Locker Service Locker Keys product information plus seven supplied 2026 customer receipts. Personal contact data, payment references and prices were deliberately omitted. Quantities and key-series totals use only values explicitly stated in the source records; the mixed MPA Hire / Tarmac order is counted as 10 keys plus six separate replacement locks.
